Compendium for Research in Mathematics Education

EDITED BY JINFA CAI

A comprehensive survey and critical analysis of today’s issues in mathematics education research

With a special emphasis on the methodological advances and a concerted effort to provide an international perspective on research in mathematics education, this volume distills research to build knowledge and capacity in the field.

A valuable new resource, the compendium provides the most comprehensive evidence about what is known about research in mathematics education.

The 38 chapters present five sections that address research about (1) foundations, (2) methods, (3) mathematical processes and content, (4) students, teachers, and learning environments, and (5) futuristic issues. Across the entries, each chapter offers a synthesis of research with an eye on the historical development of a research topic and, in particular, historical milestones of the research about the topic.

ABOUT THE EDITOR

Jinfa Cai is a professor at the University of Delaware. His research interests include cognitive studies of the teaching and learning of mathematics, mathematical assessment, cross-cultural studies, problem solving and posing, and teacher education. He is a Fellow of the American Educational Research Association. In 2017, he received the Outstanding Scholarship Award from the University of Delaware’s College of Arts and Sciences. He currently serves as editor of the Journal for Research in Mathematics Education (2017–2020). He is also co-editing the Research in Mathematics Education Monograph Series (by Springer).
